

Eric Racineux

IT Director | Senior Enterprise & IT Architect

Enterprise Architecture | Infrastructure | Industrial systems

Senior IT director and enterprise architect with more than 30 years of experience in demanding industrial and technical environments. Focused on systems architecture, infrastructure, cybersecurity and the structuring of robust, maintainable information systems.

POSITIONING

Enterprise architect focused on overall system consistency, technical architecture structuring and IT transformation leadership in demanding industrial and technical environments.

KEY EXPERIENCE

IT Director

Fondation OPEN-C - Nantes

2024-Present

Main impact: steering and securing the information system of a foundation operating critical maritime and industrial platforms.

- Defined and evolved a multi-site IT architecture covering networks, cloud, industrial systems and cybersecurity.
- Structured security governance, network segmentation and flow supervision.
- Set up a resilience and service continuity strategy (disaster recovery / business continuity).
- Led infrastructure projects and worked directly with management, industrial partners and technical teams.

Infrastructure & Cloud Product Owner

DSI Groupe La Poste

2023

Main impact: designed and delivered the target infrastructure for a private cloud transformation programme.

- Defined the private cloud infrastructure and network architecture.
- Structured the migration roadmap and decommissioning of legacy foundations.
- Delivered IaaS services and coordinated technical teams in Agile mode.

Service Owner

IT Services Catalogue - DSI Groupe La Poste

2022-2023

Main impact: structured and industrialised the infrastructure services catalogue.

- Managed a portfolio of more than 1000 infrastructure services.
- Implemented run, lifecycle and governance processes for services.
- Reworked the CMDB and industrialised the catalogue through ServiceNow while integrating performance, security and operations constraints.

IT Project Manager & Software Architect

Specinov

1994-2000

Main impact: designed and deployed distributed industrial software solutions.

- Designed and developed client/server applications in C++.
- Architected distributed software systems and led fixed-price projects.
- Deployed solutions across more than 120 industrial sites and handled client relationships.

Additional projects and experience

Main impact: portfolio covering innovation, enterprise architecture and AI.

- Industrial Agile PMO and structuring of complex ENGIE projects.
- Predictive maintenance IoT prototype (Bubbleio).
- Independent activity around enterprise architecture and AI (DeepRacine).

SKILLS

Enterprise architecture

expert

Infrastructure & networks

expert

Cybersecurity

advanced

IT transformation

advanced

Industrial systems

advanced

TECHNOLOGIES / ENVIRONMENTS

Microsoft 365, Entra ID, Intune, Defender.

Fortinet, SD-WAN, VPN, firewalling.

Windows Server, Linux, VMware.

Private / hybrid cloud.

Automation and scripting.

ITIL, DR/BCP, IT governance.

EDUCATION

ESAIP

Engineering degree in IT networks and telecommunications.

IMIE

Software developer and designer diploma.

Additional training

industrial cybersecurity and systems governance.

Eric Racineux

ADDITIONAL EXPERIENCE

Systems Integration & Test Lead

ENGIE Ineo Rail / UTS

2021

Main impact: structured and led integration testing on a complex rail project.

- Defined validation strategy and test plans.
- Structured integration methods and tooling.
- Coordinated engineering, production and client-side technical stakeholders.
- Secured validation milestones and service entry.

Head of Engineering Office

VMI

2012-2016

Main impact: transformed and structured the engineering office of an industrial machine manufacturer.

- Managed a team of 13 to 20 engineers and technicians.
- Reworked machine architectures and harmonised engineering methods.
- Led a MES project for an LVMH industrial site.
- Structured interfaces between engineering office, production and IT.
- Contributed to machine architecture and automation design choices.

Industrial IT Manager

GOSS International

2000-2011

Main impact: created and structured the industrial IT unit.

- Designed and administered industrial technical infrastructure.
- Set up a validation and test laboratory.
- Deployed supervision and remote monitoring solutions.
- Integrated embedded IT systems on industrial lines.
- Coordinated technical work internationally with engineering teams.

Scientific Software Developer

ARTUS / Meggitt

1992-1994

Impact principal: - Developed scientific software tools for test benches.

- Processed technical data and visualisation.
- Supported engineering teams.

Industrial Maintenance Technician

NOPLY - WEST MI

1990-1992

Impact principal: - Maintained industrial equipment.

- Diagnosed and resolved technical failures.
- Worked on electromechanical systems.

ACHIEVEMENTS / OUTCOMES

30+ years

of experience in IT and industrial systems.

Architectures

enterprise IT, infrastructure and industrial systems.

Critical environments

industry, offshore, rail and technical platforms.

Cross-funct. leadership

interface across management, stakeholders and technical teams.

ADDITIONAL INFORMATION

Languages: French, English, Spanish.

Sectors: industry, critical systems, IT infrastructure.

LinkedIn profile available for detailed background and publications.

TECHNICAL EXPLORATIONS

Experimenting with AI-assisted engineering tooling.

Designing a local AI agent to support software architecture and task automation.

Exploring software architectures combining AI, automation and development tools.

Active watch on cloud, software and AI architecture evolution.
